Sexual Harassment of Women May 28 2020 Over the last few decades, research, activity, and funding has been devoted to improving the recruitment, retention, and advancement of women in the fields of science, engineering, and medicine. In recent years the diversity of those participating in these fields, particularly the participation of women, has improved and there are significantly more women entering careers and studying science, engineering, and medicine than ever before. However, as women increasingly enter these fields they face biases and barriers and it is not surprising that sexual harassment is one of these barriers. Over thirty years the incidence of sexual harassment in different industries has held steady, yet now more women are in the workforce and in academia, and in the fields of science, engineering, and medicine (as students and faculty) and so more women are experiencing sexual harassment as they work and learn. Over the last several years, revelations of the sexual harassment experienced by women in the workplace and in academic settings have raised urgent questions about the specific impact of this discriminatory behavior on women and the extent to which it is limiting their careers. **Sexual Harassment of Women** explores the influence of sexual harassment in academia on the career advancement of women in the scientific, technical, and medical workforce. This report reviews the research on the extent to which women in the fields of science, engineering, and medicine are victimized by sexual harassment and examines the existing information on the extent to which sexual harassment in academia negatively impacts the recruitment, retention, and advancement of women pursuing scientific, engineering, technical, and medical careers. It also identifies and analyzes the policies, strategies and practices that have been the most successful in preventing and addressing sexual harassment in these settings.

Sustainable Tourism VII Aug 11 2021 Sustainable Tourism VII contains papers presented at the seventh in a series of meetings on the topic organised by the Wessex Institute. The papers included in the book address problems, including social costs and ecological impacts that have arisen as tourism has become an important component of development. Many ancient local cultures have practically lost their identity as their economies have become solely oriented to the tourism industry. Both the natural and cultural - rural or urban - landscapes have also paid a high price for certain forms of tourism. These problems will persist to the point of being ruinous if economic benefit is the only target. It is also a grave error to disregard the increasing cultural and environmental standards that visitors demand nowadays. Natural ecosystems are now a rarity on the planet and ecologists talk today about 'socio-ecosystems'. Natural changes are inherent in the Earth's ecosystem. Technological and social changes are inherent to mankind, and are now becoming widespread. Cities are growing rapidly and

industry requires increasingly larger areas. Many traditional rural areas are being abandoned. Tourism should play an important role in this context. Thus, interestingly, many historic agricultural districts have maintained, or even recovered, their local population numbers through intelligent strategies of tourism focused on nature and rural culture. Natural landscapes and biodiversity are becoming increasingly appreciated. The tourism industry must be able to respond to these aspirations. The papers in the book present new solutions to protect the natural and cultural landscape by minimizing the adverse effects of tourism. Topics addressed include: Tourism strategies; Environmental issues; Community issues; Climate change; Safety and security; Tourism as a tool of development; Cultural tourism; Heritage tourism; Wildlife and adventure tourism; Health and wellbeing tourism; Medical tourism; Marine and coastal areas tourism; Sport tourism; City tourism; Tourism impact; Tourism and protected areas; Ecotourism; Rural tourism; Industrial tourism; Tourism and technology; Transport and tourism; Education and tourism; Theme parks and leisure; Destination management; Planning and development; eTourism; Simulation models; Social and physical infrastructure.

Answers for Aristotle Mar 06 2021 How should we live? According to philosopher and biologist Massimo Pigliucci, the greatest guidance to this essential question lies in combining the wisdom of 24 centuries of philosophy with the latest research from 21st century science. In *Answers for Aristotle*, Pigliucci argues that the combination of science and philosophy first pioneered by Aristotle offers us the best possible tool for understanding the world and ourselves. As Aristotle knew, each mode of thought has the power to clarify the other: science provides facts, and philosophy helps us reflect on the values with which to assess them. But over the centuries, the two have become uncoupled, leaving us with questions -- about morality, love, friendship, justice, and politics -- that neither field could fully answer on its own. Pigliucci argues that only by rejoining each other can modern science and philosophy reach their full potential, while we harness them to help us reach ours. Pigliucci discusses such essential issues as how to tell right from wrong, the nature of love and friendship, and whether we can really ever know ourselves -- all in service of helping us find our path to the best possible life. Combining the two most powerful intellectual traditions in history, *Answers for Aristotle* is a remarkable guide to discovering what really matters and why.

Art & Science Sep 12 2021 For the first time, the award-winning

Education Department of the J. Paul Getty Museum is making one of its much-lauded K-12 curricula available nationwide in an attractive and inexpensive print format. Art & Science was developed by the Getty's expert educators, scientists, curators, and conservators, and tested by classroom teachers, and it connects to national and California state standards. Teachers and parents will find engaging lessons and activities divided into beginning, intermediate, and advanced levels for step-by-step learning. Art & Science mines the treasures of the Getty Museum to explore the many intersections of the visual arts with scientific disciplines. Full-color images of antiquities, decorative arts, drawings, manuscripts, painting, photography, and sculpture illuminate lesson plans about, for example:

- The laws of physics that keep a bronze sculpture of a juggler from tipping over
- The science that allows photographers to manipulate light and capture images on paper
- The processes of radiation and convection that turn clay into porcelain
- Scientific observation of the natural world as the subject for art
- How scientists removed 2,000 years of oxidation and encrustation to reveal a priceless ancient sculpture

The curriculum also contains a trove of resources, including handouts, "Questions for Teaching," a timeline, glossary, and list of print and web sources for further research. There are also links to additional related lessons and images available on the Getty website. The full-page color images and special "lay flat" binding of Art & Science make it ideal for use with a digital document reader.

Asteroid Answers to Ancient Calendar Mysteries Feb 05 2021 Ancient calendars found around the world are designed to end one point in time. They communicate an urgent warning to everyone alive today! Complex bronze and gold clocks with multiple dials are found in museums around the world. Why they have such advanced intricacy has stumped scientists for hundreds of years. This book reveals why the ancients built so many pyramids, observatories as well as those complex gold and bronze clocks with more than one dial. It surprised me greatly to discover that their various complex designs in one way or another converge on 21 December 2012. It amazes me that ancient cultures separated by thousands of miles of geography and thousands of years in chronology agree so precisely in the cyclical nature of time, history and prophecy, which is history written in advance. The most famous example is the Mayan-Aztec calendar, which ends its 25,626-year cycle on that momentous date. Some researchers have also found 21 December 2012 in what is called, the Bible Code. Using very different research methods, I discovered it in the Bible's book of Revelation and Daniel's prophecies. It is one of the most important dates in the plan of God for all humanity!

Rule Representation, Interchange and Reasoning on the Web Aug 19 2019 The 2008 International Symposium on Rule Interchange and Applications (RuleML th 2008), collocated in Orlando, Florida, with the 11 International Business Rules - rum, was the premier place to meet and to exchange ideas from all fields of rules technologies. The aim of RuleML 2008 was both to present new and interesting research results and to show successfully deployed rule-based applications. This annual symposium is the flagship event of the Rule Markup and Modeling Initiative (RuleML). Gamification with Moodle Jan 16 2022 Use game elements in Moodle courses to build learner resilience and motivation About This Book Formulate a Moodle course that acts as a flexible framework ready for your own content Keep learners engrossed and create opportunities for motivation through the concepts of status, access, and power A resourceful guide to innovative learning using automatic reports, assessments, and conditional release of activities Who This Book Is For This book has been designed for teachers who to use technology to create more engaging learning experiences for both online learning and in face-to-face sessions. This book will especially appeal to people who are interested in the underlying mechanics of play and games and want to know more about applying these concepts in an educational context. It is assumed that you are a teacher and expert in your field, have basic computer skills, and have access to the Internet. What You Will Learn Set up a scoring system using Moodle Gradebook Enable communication and collaboration in your class as a Learning Community using forums Assess your learners' abilities by setting up challenges and quests Configure gateways to check and ensure progress before new content or activities are released Create Moodle assignments to provide effective feedback through a comment bank and custom scale Issue Open Badges to recognize achievements and set up an online backpack to share digital badges Reduce anxiety for learners by using the game-like concept of "Levelling Up" In Detail This book describes how teachers can use Gamification design within the Moodle Learning Management System. Game elements can be included in course design by using, badges, rubrics, custom grading scales, forums, and conditional activities. Moodle courses do not have to be solo-learning experiences that replicate Distance Education models. The Gamification design process starts by profiling players and creating levels of achievement towards meeting learning outcomes. Each task is defined, valued, and sequenced. Motivation loops are devised to keep the momentum going. In a gaming studio, this approach would require a team of specialists with a large budget and time frames. Preparing for a class rarely has these optimal conditions. The approach used in this book is to introduce game elements into the course design gradually. First, apply gamification to just one lesson and then build up to gamifying a series of lessons over a term. Each example will indicate the difficulty level and time investment. Try it out to see what is most effective with your learners and choose wisely in your use of technology. By the end of this book, you will be able to create Moodle courses that incorporate choice, communication, challenge, and creativity. Style and approach An easy-to-follow guide full of screenshots and step-by-step instructions with estimated time frames required to

accomplish numerous tasks. Tips are offered for new Moodlers and plugin extensions are suggested for advanced Moodlers. The focus of the book is on why you would want to use each activity rather than detailed technical descriptions.

Quantitative Reasoning Jan 24 2020 Is college worth the cost? Should I worry about arsenic in my rice? Can we recycle pollution? Real questions of personal finance, public health, and social policy require sober, data-driven analyses. This unique text provides students with the tools of quantitative reasoning to answer such questions. The text models how to clarify the question, recognize and avoid bias, isolate relevant factors, gather data, and construct numerical analyzes for interpretation. Themes and techniques are repeated across chapters, with a progression in mathematical sophistication over the course of the book, which helps the student get comfortable with the process of thinking in numbers. This textbook includes references to source materials and suggested further reading, making it user-friendly for motivated undergraduate students. The many detailed problems and worked solutions in the text and extensive appendices help the reader learn mathematical areas such as algebra, functions, graphs, and probability. End-of-chapter problem material provides practice for students, and suggested projects are provided with each chapter. A solutions manual is available online for instructors.

Answer to Jung Jun 09 2021 The Red Book is C.G. Jung's record of a period of deep penetration into his unconscious mind in a process that he called 'active imagination', undertaken during his mid-life period. Answer to Jung: Making Sense of 'The Red Book' provides a close reading of this magnificent yet perplexing text and its fascinating images, and demonstrates that the fantasies in The Red Book are not entirely original, but that their plots, characters and symbolism are remarkably similar to some of the higher degree rituals of Continental Freemasonry. It argues that the fantasies may be memories of a series of terrifying initiatory ordeals, possibly undergone in childhood, using altered or spurious versions of these Masonic rites. It then compares these initiatory scenarios with accounts of ritual trauma that have been reported since the 1980s. This is the first full-length study of The Red Book to focus on the fantasies themselves and provide such an external explanation for them. Sonu Shamdasani describes The Red Book as an incomplete task that Jung left to posterity as a 'message in a bottle' that would someday come ashore. Answer to Jung brings its message to shore, providing a coherent, but disturbing, interpretation of each of the fantasies and their accompanying images.
