Porsche 968 - Limited Edition Extra Aug 27 2019 The 968 was introduced to replace the 944. It came with only one engine option, two body styles (coup\142 and cabriolet), and manual or triptronic transmission. Coming in as the cheapest Porsche to rival the Renault Alpine and Audi S2, it still had a superbly balanced chassis. The Club Sport was introduced to bring Porsche ownership to a wider market. Several items were deleted, notably the rear seats, and decals on teh side distinguish it from its more expensive brother. It was also lighter, which banished the excess body roll and the oversteer was controllable. With falling sales in 1993, a short-run Turbo S was produced with a rear wing, bonnet scoops and front spoiler. 0-60 was under 5 secs, the 3-litre engine produced 305bhp and had a 6-speed manual gearbox. The 968 Sport slotted between the CS and standard 968, a little less basic than the CS. These cars helped pull Porsche from the doldrums. This is a book of contemporary road and comparison tests, specification and technical data, new model introductions, driver's reports, buying used and history. Models covered include Sport, Club Sport, Tiptronic, Turbo S. Coup\142, Turbo S. Cabrio.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles Sep 01 2022 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
